

## **Automated Gate Instructions**

### **Visitor/Guest Instructions**

At the gate's keypad located to the driver's side of the entrance just before the gatehouse, a display listing all residents is on the front panel. Push the "A" button and the resident directory will scroll up. Push the "Z" button and the resident directory will scroll down. Holding either of these buttons down will cause the system to page through the resident directory. Resident names are listed in the resident directory alphabetically by the last name.

Once the resident's name is displayed, the visitor or guest presses the "CALL" button, and the system will connect to the resident's telephone number on record.

### **Resident Instructions**

When contact is established, the resident can talk to the visitor or guest to confirm their identity and has the option to open the gate by pressing the number "9" on their touch-tone telephone, or they can deny access to the visitor or guest by pressing the "#" on their telephone. If access is granted, the resident will hear a confirmation tone in their headset indicating that the gate has opened, then the system will automatically hang up.
